

DES MOINES INTERNATIONAL AIRPORT BRINGS FREE WI-FI TO PASSENGERS

Free Wi-Fi Offered to All Passengers, with Premium Services Available for Power Users

DES MOINES, Iowa – November 22, 2013 – Des Moines International Airport officials today announced that passengers who want to check email, post to Facebook or catch up on the news while at the airport can now do it for free on the airport's public Wi-Fi network. The complimentary service is enabled by the airport's longtime Wi-Fi provider, Boingo Wireless, using the company's industry leading media platform to provide free Wi-Fi.

"Des Moines International Airport continues to experience increased passenger traffic and the average passenger flying out of Des Moines spends approximately 45 minutes waiting for their flight to depart. Free Wi-Fi is a frequently requested passenger amenity and we're pleased to offer a complimentary access option to all of our travelers," said Kevin J. Foley, assistant executive director and general manager of the Des Moines International Airport. "Boingo is a leading innovator in airport wireless and their tiered service model makes it possible for us to offer 45 minutes of free service while still investing in the network to ensure a high quality connectivity experience."

"With demand for Wi-Fi increasing, our service provides ad-supported free Wi-Fi for the casual user while ensuring that heavy users don't compromise the integrity of the network for all," said Zack Sterngold, vice president of account management for Boingo Wireless. "Premium service for high-bandwidth users allows us to continue to invest in the network and provide access for the exploding number of users who want to get connected."

The airport will also offer premium Wi-Fi access options to travelers who wish to engage in higher-bandwidth activities, such as streaming high definition video or uploading large files. Hourly, daily and monthly access options will still be offered via Boingo.

About Des Moines International Airport:

Des Moines International Airport is a small hub airport governed by a five person Airport Authority Board. It is served by seven commercial service airlines with nonstop flights to 17 destinations. The Airport's passenger traffic increased by nine percent in 2012 and has increased another six percent year to date in 2013.
